MATERIAL WORLD

SPECIAL EFFECTS

Surfacing manufacturers have become masters of illusion. They're turning out porcelain that looks like wood and glass that simulates the richness of marble. Eco-friendly materials get a new spin with bamboo formed into wall panels and recycled leathers that go from board rooms to lounges. Metal is being shaped into fluid forms and angular, 3D patterns. Even suspension systems are changing to adapt to the need for ripples and curves. So go ahead and make some waves.
